

EXPERIENCE

- Project Lead, Game Designer & Developer** Remote
Media Lab at Fluminense Federal University May 2025 - Present
 - Standalone VR:** Co-developed an educational VR experience reconstructing 1830s Rio de Janeiro and the Cais do Valongo, a UNESCO World Heritage site, exhibited at SBPC 2026, Brazil's national science congress.
 - Project & Team Leadership:** Led four programmers, coordinating feature work through Git branches, and bridged communication with primary clients to translate provided documentation into 12 technical milestones.
 - Planning & Progress Management:** Authored the delivery roadmap and maintained a dependency register for blocked or deferred features, aligning stakeholder expectations with available development capacity.
 - Proactivity & Content Pipeline:** Identified the need, designed and implemented a designer-facing dialogue pipeline that converted Google Sheets text into typed C# enums, keeping engineering out of the writing loop.
- Technical Game Designer** Remote
Ludomancer Studio Nov 2024 - Present
 - Shipped Titles:** Contributed to several PC and mobile titles: *All Stars Merge* (Google Play; 10K+ downloads, 4.1 stars across 98 reviews), *Hotel 77* (Steam, 10 languages), *Cursed Blight* and *Memories of War* (itch.io, 1k+ plays), *Red Death Party* (English localization & QA), *COVID 35* (Multiplayer) and unreleased console titles.
 - Game Design & Systems:** Designed and implemented gameplay systems, mechanics, reward economies, upgrade trees, combat models, levels, progression flows, controller-first menus, and achievement metadata.
 - Cross-functional Team:** Worked across design, art direction, and engineering, taking ownership of diverse development needs across gameplay, narrative, UI, testing, and implementation within a remote indie studio.
- Gameplay Programmer & System Designer** Remote
Independent Contractor May 2026 - Sep 2026
 - Specification & Documentation:** Consolidated recorded specification sessions with a US-based client into a design document, resolving specification conflicts and ambiguities before implementation.
 - Systems Architecture:** Designed and implemented systems for an unannounced PC title in Unity 6 and C#, using data-driven behavior that allows designers to add and tune content without engineering changes.
- Software Engineering Intern** Remote
Radix Engineering and Software May 2022 - May 2023
 - Software Development:** Shipped app features to the passenger and driver apps of a ride-hailing platform, standardized error handling across 16 modules and closed 20+ defects through pull-request code review.

CORE SKILLS

- Design & Planning:** GDDs, Level, Narrative & Technical Design, Prototyping, Gameplay Balance, Playtesting
- Technical Development:** Gameplay Programming, Performance Optimization, Data-Driven Architecture, C#
- Production & Leadership:** Cross-functional Collaboration, Project & Team Management, Git, Scrum & Kanban
- Platforms & Engines:** Controller-first UI, Achievement Design, Steam, Console Certification Submission, Unity
- Spoken Languages:** English (Fluent, C1 MET certified), Brazilian Portuguese (native)

EDUCATION

- Bachelor of Science in Information Systems** Niterói, Brazil
Fluminense Federal University Aug 2020 - Dec 2026 (Expected)

INDEPENDENT PROJECTS

- Wander TTRPG System:** Designing a 2d10 TTRPG, balancing 120+ elements through spreadsheet modeling.
- Prison Break: Escape Big Sister:** 2D stealth platformer demo built in Python/Pygame, available on itch.io.
- Research:** Currently documenting video game history through chronological play of culturally relevant games, from 1947 onward, building a broad reference base for game design, so my backlog is close to infinite.
